

RAMI SHOULA

To

Mrs Lastwell,
PreGen

11/08/2020

Dear Mrs Lastwell,

As a recently graduated biotechnology major at the University of California, I am excited for the opportunity to work with you at PreGen. My university biotech assignments centred around the food production industry and I firmly believe that technology will help to feed the world of the future.

After leaving with a GPA of 3.8 from Jefferson College, I immersed myself into the academic side of college life. We enjoyed close research links with local agritech community, and I undertook five separate work placements. I was fascinated by molecular diagnostics and even worked part-time on a project to improve crop yields in Kenya. Your international focus is exactly where the world needs to be focusing its efforts right now.

A junior research associate role with you would provide an ideal starting point. Your track record of developing the brightest of young scientific minds is unmatched in the industry and I yearn to follow in the footsteps of your award-winning agritech magicians.

My education and work experience have combined to give me a solid understanding of laboratory procedures and industry best practice including greenhouse operations and the maintenance of research and chemical application equipment. I saved one work experience employer over \$240k by creating a unified operational manual for all employees.

I have spent years immersing myself into the theory of genomics and I look forward to putting my knowledge to use. I enclose a portfolio of my academic research work and have over 20 letters of recommendation from the scientists that I have assisted.

I can't wait to hear about the potential projects where my contribution may make a difference – an interview to explore the possibilities would be a dream.

Yours sincerely,

Simon Trenton
